Washington, DC 20500

Dear President Clinton,

I would like to introduce Mr. Dean Kraft, a Touch Healer, from Pacific Pallisades, California. Dean has had phenomenal success since the early 1970's with his practice of the "Laying On of Hands" touch therapy.

I have recently seen Dean and I can say that he is the most amazing man that I have ever seen. The successes he has had with his cancer patients has been exciting, if not extra-ordinary to say the least. His 20 plus years working with Scientific Research Foundations all over the United States has had great impact in the field of cancer research and pain management.

At the Science Unlimited Research Foundation in San Antonio, Tx., Dean was involved with research in determining what effect his healing and energy transference would have on cancer cells in a test tube. The conclusion was that Dean was able to destroy more virulent cancer cells than by conventional medical means.

Dean feels that he can be of significant help in finding a cure for cancer. He feels that if the parameters around the cancer cells can be measured while he is treating them, then perhaps scientists can define the force field and duplicate it to create a machine to digress tumors. He also believes that very strongly that the AIDS virus can be treated as effectively.

Dean wanted to give you an autographed copy of his book "Portrait of a Physic Healer" and a video copy of his most recent television appearance. Enclosed you will also find all the documentation concerning his amazing abilities. Dean would like to have the opportunity to help in finding a cure for cancer and AIDS. Dr. Joe Jacobs is the head of the new Office for Alternative Medicine at the National Institute of Health. If there will be any continuing scientific research concerning cancer and AIDS, Dean offers himself and his abilities unselfishly in the quest for cures of these deadly and debilitating diseases. I send this material with great hopes and expectations that something can be done.

As Always

Bruce Taylor
